1990 Subject Index

A Guide to MP *Volume 29*

This index is an alphabetical list of topics included in Volume 29 of Materials Performance. *Information classifications (***bold** *headings) are followed by subject, issue number, and beginning page number. For example, information concerning catastrophic failure in aircraft is found under* **AIRCRAFT**, *in the March issue (3), in an article that begins on page 80.*

A

ABRASION
Coal water slurry effect, 5-44
Internal surface preparation of pipelines, 8-50
Particle velocity effects, 9-61
Wear, factor in, 3-54

AIRCRAFT
Catastrophic failure, 3-80
Control programs for civilian, 10-10
Inspection, 3-80
Time factors vs, 3-80

ALASKAN PIPELINES
Alaskan pipelines, 12-26

ALKALINE STRESS CRACKING
In amines, 9-54

ALLOYS
Rapidly solidified vs hot acids, 10-50

ALUMINUM
Alcohols, glycols, phenols vs, 11-51
Anode tests in hot brine, 6-14
Based Ti vs NaCl, 10-50
Electronic contacts, influence, 9-68
Lithium, magnesium, Ti alloying effects, 10-77
Molten, attacking, 11-54
Organic solvents vs, 11-51

AMMONIA
Brass valve cracking by mouse urine, 4-57

ANODES
See cathodic protection

ANODIC PROTECTION
Economic merits, 12-68

ATMOSPHERIC EFFECTS
Electrical equipment, 12-43
Marine vs stainless steels, 12-60,63
Swimming pools vs stainless steels, 12-57
Thermal insulation, 7-38

B

BACKFILL
Partially buried tanks, 9-13

BIOCIDES
Cooling water, 9-40
Petroleum refinery Ti heat exchangers, 9-48
Pipeline biological attack, use of, 4-53
Sulfate bacteria vs, 7-26

BIOLOGICAL EFFECTS
Alyeska pipeline, attack, 12-26
Anaerobe activity in pipeline deposits, 4-53
Bacteria identification in pipeline leaks, 4-53
Bacterial attack, heat exchangers, 9-40
Biocide tests, 12-49
Dental amalgam corrosion, 9-60
Electrochemistry, 1-72
Historical perspective, 9-40
Marine growth under anodes, 5-19
Microbiologically influenced, 1-72; 8-61
Seed exposure in space, 10-63
Sulfate bacteria, 1-72; 7-26

BOLTS
See fasteners

BONDS
Concrete cylinder pipe, 2-22

BRICK
Ceramic vs flue gas, 10-55

BRIDGES
Cable-stay, 3-38
Street railway crossing, 7-19
Suspension cables, 3-38

BUILDINGS
Slabs, concrete, reinforced, 12-15
Water systems, 10-40

C

CALCULATIONS, PREDICTIVE
Concrete, steel reinforced, 12-20
On paper mill attack, 12-43
Petrochemical plants, 11-70
Value of, 12-68

CAPACITORS
Earth in CP calculations, 3-23,31

CARBON
Dioxide effects, 4-65; 6-21
Dioxide elastomers vs, 11-40
Dioxide testing, 7-81
Stainless steels, cracking influence, 12-60

CARBONATES
Reactions vs Fe in brine, 1-49

CAST IRON
Pipe, 1-22; 4-27; 8-50

CASTINGS
Steel, stainless, quality control, 5-55

CATHODIC PROTECTION
347 steel by C steel, 11-60
Anodes, 5-13; 6-14; 7-26; 10-13
Backfill calculations, 10-13
Bacterial effects on, 7-26
Bracket, anode design, 5-19
Capacitance properties of environment, 3-23,31
Concrete, steel reinforced, 4-17; 12-20
Concrete cylinder pipe, 2-22
Concrete house slabs, 12-65
DC interference, 3-23
Earth chemical reactions in, 3-23,31
Galvanic, in seawater, 4-13
Groundbed calculations, 9-16; 10-13
Hydrogen sulfide effects on, 7-26
Impressed current ground beds, 10-13
Offshore platform, 4-13; 5-13
Ohm's law in, 3-23,31
Pipe pitting at coating holidays, 8-22
Polymer wire, Ti mesh anodes, 4-17
Potential survey test system, 11-18
Potential tests, waveform/pulse generator, 11-18
Reference electrodes near tanks, 9-13
Resistance calculations, 3-23,31
Tanks, internal surfaces, 10-30
Tanks, partially buried, 9-13,16
Testing in deep seawater, 4-13
Time factor in deep seawater, 4-13
Tube sheets in heat exchangers, 11-56
Vertical concrete, steel reinforced, 4-17
Weld coatings influence, 8-17

CAVITATION
Mechanism, boat propellers, 11-49

CERAMICS
Properties, 12-78

CHARGE TRANSFER
Mechanisms, 3-36

CHLORIDES
Concrete, steel, 4-17

Concrete slabs vs, 12-15
Metals vs water solutions, 11-56
Phosphoric acid, critical content, 4-60
Truck tank failure due to, 7-75

CHROMIUM-NICKEL ALLOYS
C-276, cold worked tubes, 8-55

COAL
Slurry, inhibitors for, 5-44

COATINGS
Alyeska Pipeline, 12-26
Chromate conversion, steel, 8-35
Concrete, internal linings, 2-36
Inorganic, zinc, 5-26; 8-68; 10-27
Pipeline, polypropylene, 10-18
Silicates, VOC compliant, 11-25
Zinc silicates, water based, 11-25

COATINGS, METAL
Aluminum, sprayed on steam systems, 7-44
Copper, tin anodic to Fe, 7-26
Electroplated, hydrogen embrittlement by, 7-71
Gold-plated electronic junctions, 9-68
Hydrogen, vs, 10-77
Nickel, chemically deposited, 7-65

COATINGS, ORGANIC
Adhesion, stress affecting, 4-30
Applicator training, 3-51
Blisters, characterization, 9-26
Case histories, 1-35
Dielectric for concrete, 2-22; 10-37
Epoxies, 4-30; 7-44; 8-17,30,35; 9-26
Flanges, electronic equipment, 7-76
Inspections procedures, 2-41; 4-30; 7-49
Marine fasteners, 4-65
Modification design controls, 5-41
Molybdates in, 5-48
Osmotic pressure effects, 9-26
pH under disbonded, 8-22
Phenolics, internal stresses, 4-30
Piling, failure from stray current, 9-31
Pipelines, 8-30; 10-18
Petroleum equipment, 2-60; 5-35
Polyester, properties, 2-32
Potentials near holidays, 8-22
Powder, particle size effects, 5-42
Railroad cars, 3-43
Residual solvent, explosion hazard, 6-37
Sea marine environment vs, 1-43
Solvent influence on blistering, 9-26
Specifications, 3-43
Tanks, 8-44; 9-13
Thermal insulation under, 5-26, 7-38
Tubes, long, 2-60
Tubing, petroleum well linings, 7-58
Urethanes, pipeline, internal, 8-30
Zn-loaded, dry spray, 4-39

COMBUSTION GAS
Glass block linings vs, 10-55

COMPUTER PROGRAMS
CO_2, H_2S testing, 7-81
Cathodic protection groundbeds, 10-13
Sulfide stress cracking materials, analysis, 10-69

CONCENTRATION CELLS
Deposits in water pipes, 10-40

CONCRETE
Cathodic protection of steel reinforced, 4-17
Coal tar coatings failure, 10-37
Cylinder pipelines, 2-22
Electrically insulating, 7-19
Epoxy for repairs to, 2-32
Fiber reinforced sulfur polymer, 12-73
Pipeline linings, 1-22; 2-36
Slab, crack repairs, 12-15
Steel reinforced, 12-15,20,33
Sulfur polymer cement for, 12-73
Vertical, steel reinforced, 4-17

COPPER AND ALLOYS
Electronic controls vs Cl, 9-68
Heat exchangers in salt water, 9-48
Solution velocity limits, 11-56
Water pipes, 10-40

CRACKING
Stress corrosion, nuclear reactors, 1-66

CREVICES
Corrosion, duplex steels in, 1-57
CrNi from surface treatment, 8-61
Fasteners, attack in, 4-65
Pitting potentials in, 8-22
Stainless attack at, 11-56; 12-60

D

DAMS
Deterioration, 6-63

DENTAL AMALGAM
Mercury poisoning from, 9-60

DESIGN
Cathodic protection groundbeds, 10-13
Conservative decisions' effects, 12-68
Control equipment rooms, 12-43
Electromagnetic attack, enclosures vs, 7-76
Glass blocks vs flue gas, 10-55
Heat exchangers, 11-56
Swimming pools, 12-57
Tank bottom cathodic protection, 9-16
Weathering (low alloy) steels, FHA recommendations, 7-74

DOCKS
Coatings failure on, 9-31

E

ECONOMICS
Al sprayed vs Al solvent dispersed, 7-44
Cathodic protection of concrete pier, 4-17
Cu alloy, Ti vs petroleum refinery cooling water, 9-48
Design alternatives, 12-68
Petroleum refinery inhibitors, 2-71
Pipeline coatings, high temperature, 10-18
Polymer pipe, glass reinforced, 6-35
Polymeric wrap for bridge cables, 3-38
Street railway, Portland, Oregon, 7,19
Tank bottom cathodic protection, 9-16

EDUCATION
Colleges with corrosion courses, 11-81

ELECTRIC FIELDS
Effects of, 7-76

ELECTRICAL EQUIPMENT
Paper mill controls, 12-43

ELECTROCHEMICAL
Scrubbing of SO_2, 5-53

ELECTROMAGNETIC FIELDS
Electronic devices, effects of, 7-76

ELECTRON SPECTROSCOPY
Cooling water inhibitor tests, 1-45

ELECTRONIC EQUIPMENT
Atmospheric attack, 12-43
Capacitor failure, 4-76
Chemical concentration measurement by, 5-68
Chlorine attack, 4-76
Corrosion product creep, 9-68
Electrical resistance probe, 5-68
Electromagnetic fields vs, 7-76
Environmental effects, 7-76
Fretting effects, 4-76
Solder flex failure, 4-76
Telephone, bacterial attack, 7-26
Transducers, semiconductors for rate measurement, 5-68
Whiskers, other causes, 4-76

EROSION
Water system, 10-40

ETHANOLAMINE
C-steel cracking in, 9-54

EUROPE
Tank internal protection in, 10-30

F

FABRICATION
Amine service components, 9-54
Metal-ceramic vs space particles, 10-76

FAILURE ANALYSIS
Oil well sucker rods, 9-37
Prediction, 6-40

FASTENER BOLTS
Anodes, contacts via, 5-19
Bolt failures, 2-64
Bolt standards, 2-64
Galvanic effects, 4-65
H embrittlement, 7-71
Marine environments vs, 4-65
Mechanical properties, 4-65
Stainless steel, Cu alloys in Al, 4-65
Threaded, electroplated metals on, 7-71

FASTENERS
Aircraft counter-sunk rivets, 3-80

Al, stainless, fiber reinforced, 4-65
Cracking in marine atmosphere, 12-60

FATIGUE
Aircraft, 3-80

FERTILIZER PLANTS
Sulfur polymer concrete for, 12-73

FILMS AND SCALES
Chloride waters by, 11-56

FILTERS
Air, for electronic equipment, 12-43

FIRE HAZARDS
Polymeric materials, 5-26; 6-54

FLOORS
Sulfur polymer concrete for, 12-73

FLUE GAS
Desulfurization systems, 1-32

FOOD
Tomato sauce vs AISI 316 welds, 10-60

G

GALVANIC ATTACK
Electronic equipment joints, 7-76; 9-68
Sir Humphrey Davy, 10-47

GASKETS
Conductive in electronic equipment, 7-76

GASES
Corrosive vs electronics, 9-68
Elastomers vs, 11-40

GLASS
Block linings, 10-55

GREASES
Fastener, 4-65

GROUND BEDS
See Cathodic Protection

GROUNDS
Tanks, partially buried, 9-13

H

HALOGENATED SOLVENTS
Hazardous reactions, 11-51

HEAT EXCHANGERS
AISI 304, Hastelloy C-276 vs microbes, 9-40
Carbon steel vs microbes, 9-40
Cooling coil galvanic cathodic protection, 11-60
Cupronickel vs microbes, 9-40
Efficiency tests, 11-63
Fouling tests, RP0189-89, 4-42
Metals selection, 11-56
Titanium in petroleum refineries, 9-48

HEAT TREATMENT
Amine stress corrosion cracking controls, 9-54
Cr Fe Ni W welds, 8-55
Stainless steels, vs marine atmosphere, 12-60

HOLIDAY TESTS
Coatings on pipe welds, 8-7
Organic coatings on concrete, tests, 10-37
Pipeline coatings, 2-18

HYDROGEN
Cracking, computer analysis, 10-69
Diffusion from metals, 7-71
Embrittlement during metal plating, 7-71
Embrittlement, Ti tubes vs ammonia, 9-48
Stress corrosion cracking in amines, 9-54
Ti-Al vs, 10-77
Weld offgassing vs coatings, 8-17

HYDROGEN SULFIDE
Ammonium sulfide vs Ti, Al, bronze, 9-48
Elastomers vs hot, 11-40
Electronic equipment vs, 9-68
Microbiological tests involving, 12-49
Natural gas, increase in, 6-21
S influence with, 2-48
Sucker rods vs, 9-37
Testing, 7-81

HUMIDITY
Controls, 12-43

I

INCLUSIONS
Metals, biological attack at, 12-49

INFORMATION
Uncoded, deficiencies, 12-68

INFRASTRUCTURE
Corrosion engineers' involvement, 2-53

INHIBITORS
Brine, petroleum well, 1-49
Coal-water slurry, 5-44
Cooling water, 1-45; 9-40
Crude and gasoline pipelines, 5-52
Generic, efficiency ratings, 2-44
Imidazoline, 2-48
Iron, inhibitor reactions with, 1-49
Metaphosphates, 2-54
Microbe controls by, 12-49
Molybdate properties, applications, 5-48
Neutral aqueous solutions, 6-45
Oxide film effects, 6-45
Petroleum refinery, 2-71
Petroleum wells, 7-58
Review, 2-44
S vs oilfield, 2-48
Selectivity in neutral solutions, 6-45
Steam boiler tube passivating, 7-53
Time vs decay potential on steels, 6-45
Water for Al, Ti, steel, Ni vs solvents, 11-51
Wear, factor in, 3-54

IN PLACE (IN SITU)
Internal pipeline coatings, 8-30

INSPECTION
Design recommendations, 12-68
Pipeline internal coatings, 8-30
Systems handling amine solutions, 9-54

INSULATION
Thermal, inspection under, 5-26; 7-38
Thermal, pipeline, extreme attack under, 12-26

IRON
Calcium carbonate, inhibitors for, 1-49

ISOBUTYL ALCOHOL
Mg vs, 10-30

J

JAPANESE
Petroleum production technology, 2-60

JOINING
Adhesive, FRP pipe, 6-21

L

LEAD
Drinking water controls, 8-45

LIGHT POLES
Failure due to bolt boxes, 8-66

LININGS
Railroad cars, 3-43
Tank bottoms, linings under, 9-16

LUBRICANTS
Sucker rods in petroleum wells, 9-37

M

MANHOLES
Bacterial attack in, 7-26

MARINE ATMOSPHERES
Fasteners in, 4-65

MASONRY
Aswan Dam deterioration, 6-63

MATERIALS IDENTIFICATION
Tests, 5-61

MATERIALS RECOMMENDATIONS
NACE MR0175, historical, 2-66

MERCURY
Dental amalgam, biological effects, 9-60

METALS
Bacterial effects on Cu-Sb couples, 7-26
Liquid embrittlement, cracking by, 11-54
Powdered, rapidly solidified, 10-50
Powdered vs hot acids, 10-50
Powders, Al ignition in solvents, 11-51

METALWORKING FLUIDS
Molybdate inhibition in, 5-48

METHANOL
Mg vs, 10-31

MOLYBDENUM
Disulfide lubricants, 9-37

N

NACE STANDARDS
British and NACE standards cooperation, 11-16
RP0189-89, Standard Recommended Practice: On-Line Monitoring of Cooling Waters, 4-42

NATURAL GAS
Carbon dioxide increases in, 6-21
Radar leak detection, 4-27

NICKEL
Chromium alloys, 66C nitrogen-chloride solution vs N08330, 3-72
Electroless (chemically deposited) coatings, 7-65
Molybdenum-chromium alloys vs acids, 10-50

NITRIC ACID
Storage in fiber reinforced polymers, 6-54

NITROGEN
Dioxide vs electronic equipment, 9-68
Internal pipeline cleaning, 8-30

NONMETALS
Fasteners for, 4-65

NUCLEAR REACTOR
Boiling water, 1-66

O

OFFSHORE
See Petroleum Production

OXIDES
Wear, influence on, 3-54

OXYGEN
Boiler scavengers, 7-53
Corrosion rate influence, 3-23

P

PAPER INDUSTRY
Fiber-reinforced polymers in, 6-54
Pulp mills, gases in atmosphere, 12-43

PASSIVATION
Steam boilers by carbohydrazide, hydroquinone, 7-53
Steel in concrete, 12-33

PAVEMENT
Gas leak tests through, 4-27

PETROCHEMICAL
Plant life predictions, 11-70

PETROLEUM PRODUCTION
Carbon dioxide effects, 7-58
Coatings for equipment offshore, 5-35
Coatings in Gulf of Mexico, 5-35
Drill stem coatings, 8-68
Elastomer testing for, 11-40
Fiber-reinforced polymer pipe, 6-21,29; 8-73
Gas lift wells, coatings in, 7-58
Inhibitors downhole, 7-58
Microbiological effects, 12-49
North Sea jacket protection, 5-13
Pipeline repair, 12-26
South Atlantic jacket protection, 5-19
Sucker rod lubricants, 9-37
Wire lines vs coatings, 8-68

PETROLEUM REFINING
Additives used in, 2-71
Alkaline stress cracking in amines, 9-54
C-steel-Monel in, 9-48
Titanium for, 9-48
Weld overlays on vessels, 11-45

pH
Concrete, steel in, 12-33,57

PILING
Concrete, steel reinforced cathodic protection, 4-17
Sheet, coatings for, 1-35

PIPELINES
AISI 304 failure, 1-72
Alyeska, inhibitors, 12-26
Bacterial attack on gas, 4-53
Burst tests of defects, 5-75
Chromate pretreatment before coating, 8-35
Coating defect standards analysis, 5-75
Coatings, high temperature, 10-18
Coatings, internal, 8-30
Concrete cylinder, 2-22
Concrete linings for, 2-36
Corroded area geometry influence, 5-75
Epoxy for repairs to, 2-32
External attack, 12-26
Fiber reinforced epoxy liner, 11-30
Fiber reinforced polymer, 6-21
Internal chemical cleaning, 8-30
Iron carbonated deposits, bacteria attack under, 4-53
Leak, pitting detection by radar, 4-27
Lining in place, 11-30
Long external corrosion analysis, 5-75
Petroleum, repairs, 12-26
Rate calculations, 2-18
Stray current from street railway, 7-19

PIPES
Bi metallic pipes, 9-48
Building, water, 10-40
Cast iron, historical note, 6-51
Electrical resistance welded, standards for, 9-21
Fire protection, dry, 10-40
Pitting of protected, 8-22
Polymeric, glass reinforced, 6-35; 8-73
Ti in heat exchangers, 9-48
Underground, federal regulations, 9-21
Water: failure analysis, 8-50
Welded C-276, cold work types, effects, 8-55
Welds, epoxy powder coatings, 8-17
Well tubing internal attack, 7-58

PITTING
Cr Ni alloys from surface treatment, 8-61

POLARIZATION
Decay in reinforced concrete, 12-20
Steel in deep seawater, 4-13
Wear, influence on, 3-54

POLES, LIGHT
Environmental attack on bases, 8-66

POLYETHYLENE
Wrap, loose for iron pipe, 1-22

POLYMERIC MATERIALS
Elastomers vs hot H_2S, CO_2, 11-40
Fiber reinforced, 6-29
Fiberglass tanks, underground, 10-30
Flue gas ducts, 1-32
Furane properties, 6-29
Glass fiber reinforced pipelines, 6-21; 8-73
Glass reinforced linings, 6-29
Information sources, 6-54
Inimical environments, 11-78
Neoprene for bridge cables, 3-38
Paper industry case histories, 6-54
Petroleum production for, 2-60
Petroleum wells, in, 6-29
Pipe failure case histories, 6-21,29
Pipe standards, 6-21
Urethane railway track insulation, 7-19

POTENTIALS
Soil surveys, 2-22
Street railway pipeline, 7-19
Structure-to-soil calculations, 2-18

PREDICTIVE CALCULATIONS
Pipelines underground, 2-18

PRESSURE
Fiber reinforced polymer pipe, limits, 6-21; 8-73

PROGRAM
NACE 1991 Conference, Advance, 10-93

PUMPS
Bronze, potable water vs, 10-40

Q-R

QUALITY CONTROL
Welding of stainless steels, 10-60

RADIATION
Boiling water reactor, effects of, 1-66

RAILWAYS
Hopper, tank car coatings, 3-43
Portland, Oregon, surface, 7-19
Street, electrical system design, 7-19

RATE CALCULATIONS
Pipelines underground, 2-18

RATE MEASUREMENT
Electronic sensors, 5-68

REFERENCE ELECTRODES
Tank Bottoms, 9-16

S

SAFETY
Al, Ti, steel, Ni in solvents, 11-51

Lead effects in drinking water, 8-45
Organic solvent residue explosion, 6-37

SCALE
Calcium carbonate on iron, 1-49
Calcium hydroxide on steel in concrete, 12-33

SEA MARINE ENVIRONMENTS
Coatings, effects on, 1-43

SHIPS
Aluminum coatings vs high temperature, 7-44
Chemical tanks in, 4-60; 8-6
Coatings blistering, 9-26
Steam engines, history, 11-49

SLIME MEASUREMENT
Slime measurement, 9-40

SODIUM CHLORIDE
Concrete, reinforced, vs, 12-33
Swimming pool atmosphere vs steels, 12-57

SODIUM HYPOCHLORITE
Sulfate bacteria vs, 7-26

SOIL
Chloride contaminated resistivity, 12-15
Resistivity surveys, 1-22; 2-22

SOLDER LEAD
Dissolution in drinking water, 8-45

SPACE ENVIRONMENT
Long Duration Exposure Facility analysis, 10-63

STANDARDS
British and NACE standards cooperation, 11-16
Design limitations, 12-68

STANDBY EFFECTS
Bacterial attack on heat exchanger, 9-40
Stainless steels in hot, humid atmospheres, 12-63
Tubes, retained water vs, 11-56

STATISTICS
Applications, 2-68; 7-87
Averages comparisons, 2-68
Bibliography, 7-87
Coatings blisters, 9-26
Errata, Part 2, 4-73
Factorial experimentation, 6-74
Failure prediction, 6-40
Latin square design, 4-73
Practical applications, 6-74; 7-87
Two-factor analysis, 4-73
Variables, optimum combinations, 6-74

STEAM
Boilers, 7-53
Piping, fittings, Al, coatings on, 7-44

STEEL, CARBON
Coatings under thermal insulation, 5-26
Surface preparation, 8-35

STEEL, Cr, Ni
AISI 304, pipeline failure, 1-72
Nuclear reactor, 1-66

STEELS, DUPLEX
Acid chemicals, resistance to, 1-57
Alloy 2205 for chemical tanks, 4-60
Applications, 1-57
Fabrication, 1-57
N as alloy in, 1-57
Specifications, 1-57
Welding, 2-55

STEELS, STAINLESS
See also Steels, Duplex
AISI 304, 316, in swimming pools, 12-57
AISI 430 (UNS S43000) embrittlement, 6-70
Austenitic, chloride cracking in atmosphere, 12-60
Austenitic, SCC under insulation, 5-26
Biological attack, heat exchanger, 9-40
Casting quality controls, 5-55
Chemical surface treatment, 8-61
Electronic equipment, effects, 9-68
Fasteners in Al, 4-65
Free machining cracking, 12-60
Free machining vs marine environments, 4-65
German developments, 4-64
Heat exchangers, 9-48
Liquid metal embrittlement, 11-54
Mechanical surface treatment, 8-61
Origin, history, 3-64
Petroleum productions for, 6-21
Rapidly solidified vs hot acids, 10-50
Sensitized, SCC in marine atmosphere, 12-60
Stress cracking in tomato sauce, 10-60
Sulfides, surface effects, 8-61
Sulfuric acid tank cleaning, 8-6
Thermal insulation, 7-38
Unsensitized vs marine atmosphere, 12-63
Welding, 2-55
Work-hardening effects, 12-63

STEELS, WEATHERING
Federal Highway Administration advisory, 7-76

STRAY CURRENT
Concrete cylinder pipe vs, 2-22
Railways, street, 7-19
Welding, 9-31

STRESS
Glass-reinforced polymer pipe vs, 8-73
Liquid metal attack, influence of, 11-54
Metal, internal, H embrittlement influence, 7-71
Stainless steel studs, torque vs cracking, 12-60
Welding, residual, 2-55

STRESS CORROSION CRACKING
C-steel in amines, 9-54
Environments vs materials, 2-55
Stainless, steels, in swimming pools, 12-57
Stainless, steels, unsensitized, 12-63
Sulfide, materials vs, 10-69
Thermal insulation, under, 7-38

SULFATES
Concrete slabs vs, 12-15

SULFUR
Inhibitors, oilfield, influence of, 2-48

SULFUR DIOXIDE
Electrochemical scrubbing, 5-53

SULFURIC ACID
Ship tank cleaning, 8-6
Tanks vs, 4-60

SURFACE EFFECTS
Iron on stainless steels, 12-63
Wrought Cr Ni steels, fabrication, 8-61

SURFACE PREPARATION
Abrasion, steel grit, 3-43
Concrete, for organic coatings, 10-37
Contaminated abrasive, 3-43; 5-65
Fastener cleaning prior to electroplating, 7-71
Flue gas duct linings, 1-32
Metals, prior to Ni-phosphorus coatings, 7-65
Pipeline, internal, 8-30
Railroad cars, 3-43
Weld overlays, 11-45

SWIMMING POOLS
Stainless steels in, 12-57

T

TANKS
Brine, Al anodes tested in, 6-14
Highway track, phosphoric acid failure, 7-75
Liquified propane gas, 9-13
Steel, bottom protection, 9-6
Steel, failure prediction, 6-40
Sulfuric acid, cleaning with seawater, 4-60
Underground internal corrosion, 9-22; 10-30

TEMPERATURE
885 F (475 C) embrittlement of AISI 430, 6-70
Al sprayed coatings on steam fittings, 7-44
Critical for stress corrosion cracking, 7-38
Glass reinforced polymer pipe vs, 8-73
High, pipe reactions at, 11-70
High, process equipment life prediction, 11-70
High, vs coatings, 5-26
Ship chemical tanks vs C, 4-60
Stainless steel Cl cracking vs 30 C, 12-57

TESTING
Accelerated chromated steel, 8-35
Alkaline stress cracking by wet fluorescent magnetic particle, 9-54
Argon ion sputtering, inhibitor tests, 1-45
Carbon dioxide, hydrogen, sulfide media, 7-81

Carbonate, sulfide, Fe, concentrations' effects, 7-81
Cathodic protection in deep seawater, 4-13
Coatings, internal stress, 4-30
Coatings, marine service, 9-26
Coatings, preliminary, importance of, 1-35
Cooling water inhibitors, biocides, 9-40
Cooling water, corrosion rates in, 11-63
Cooling water, instantaneous rate meters, 11-63
Cooling water, NACE RP0189-89, 4-42
Cooling water, pH conductivity control, 11-63
Data reliability for design, 12-68
Elastomers vs hot H_2S, CO_2, 11-40
Electromagnetic tests, pipeline leaks, 4-27
Electron micrography of oilfield scale, 2-48
Electron microscopy of microbe attack, 12-49
Electron spectroscopy, inhibitor, 1-45
Electronic vs CI, 9-68
Equipment, copper in paper mill, 12-43
Equipment for water fouling, 4-42
Equipment, magnetic flux, ultrasonic pipeline pigs, 12-26
Fiber reinforced pipeline liner, 11-30
Fiber reinforced sulfur polymer concrete, 12-73
Inspection under thermal insulation, 7-38
Materials identification, 5-61
Microbiological monitors, 11-63; 12-49
Nondestructive, plant life predictions, 11-70
Petroleum production materials, 2-60
pH importance, CU_2, H_2S testing, 7-81
Pipeline internal ultrasonic, 12-26
Piping, wall thickness measurement, 7-38
Polymeric coupons, 6-54
Potentials under coating holiday, 8-22
Pulse generator for cathodic protection potential surveys, 11-18
Radar leak detection on pipelines, 4-27
S, autoclave vs oilfield inhibitors, 2-48
Scale by visual methods, 11-63
Specimens, disk, cylinder for velocity, 9-61
Steel reinforced in concrete, 12-33
Sulfate bacterial effects, 7-26
Tank internal corrosion, 10-30
Tanks, partially buried, 9-13
Thermal insulation, through, 7-38
Water main failures, 8-50
Well drill stem; magnetic flux, 8-68

TITANIUM
Petroleum refinery use, 9-48

TRANSDUCERS
Rate measurements, 5-68

TRANSPORTATION
Tank truck failure, 7-75

U-V

ULTRAVIOLET ATTACK
Fiber reinforced polymers, 6-21

UNDERGROUND
Partially buried LPG tanks, 9-13
Soil pH, resistivity failure factors, 6-40
Steel failure prediction, 6-40

VALVES
Brass, cracking by mouse urine, 4-57

VELOCITY
Rate factor, 9-61
Saline water effects, 11-56
Water attack on Cu, 9-49;10-40

VIBRATION
Heat exchangers, failures due to, 9-48

VOLATILE ORGANICS
Coatings containing, 3-43
Water-based Zn without, 10-27
Zinc silicate coatings, 11-25

W-Z

WATER, COOLING
Fouling factor tests, 11-63
Molybdate inhibitor, 5-48
pH, conductivity controls, 11-63

WELDING
Alloying influence on, 2-55
Biological attack, 1-72
Carbide precipitation, 2-55
C-steel, ethanolamine cracking, 9-54
Cold worked, annealed C-276, 8-55
Concrete-lined pipe, 2-36
Contractor evaluation, 11-45
Duplex steels: 2205, 4-60
Fire protection pipe electric resistance, 10-40
Flange into SS 316, 10-60
Flux effects on H diffusion, 8-17
Nuclear reactors, in, 1-66
Overlays on process equipment, 11-45
Pipe, electrical resistance, standards for buried, 9-21
Pipe seam grinding, 8-17
Porosity in pipe, 8-17
Replica standard, NACE, 3-50
Stainless to carbon steel, 4-70
Stray current coating failure, 9-31
Stress relief by explosive detonation, 5-66
Weldmetal composition, 2-55

WHISKERS
Electronic equipment, on, 9-68

WOOD
Pier, 100-year life, 4-17
Water pipe, historical note, 6-51

ZINC
Molten, attack by, 11-54

1990 Author Index
